SUMMARY

Product-minded Full-Stack Engineer with 2+ years building **production-grade APIs, automation systems, and real-time features**. Experienced across the full delivery lifecycle - from **system design and backend architecture** to **React frontends, third-party integrations, and deployment on AWS**. Currently driving **server-side ad tracking, AI-powered workflow automation, and e-commerce infrastructure** independently. Strong bias toward **ownership, clean code, and engineering that directly moves business outcomes**.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java

Frontend: React, React Native, Liquid (Shopify)

Backend: Node.js, Express, FastAPI, REST APIs, WebSockets

Cloud & Infra: AWS S3, Cloudflare Workers, MongoDB

Automation & Tools: Make.com, Airtable, Meta Ads API, Google Analytics 4

Concepts: Microservices, MVC/MVVM, SOLID/DRY, System Design, CI/CD

EXPERIENCE

FML – flipmylife.in

May 2025 – Present

Software Engineer II

Remote

- Built a server-side Meta Pixel conversion tracking system **from scratch using Cloudflare Workers** - capturing **ad-level click IDs, threading them through the payment gateway**, and firing server-side events; delivered **100% cookie-independent, iOS-proof attribution** that browser-side pixels fundamentally cannot achieve.
- Designed and shipped a fully automated **order-to-dispatch pipeline** using **Make.com, Airtable, and custom Node.js** - covering order confirmation, dispatch triggers, and customer messaging across **email and WhatsApp**, reducing manual operations overhead by **~80%** with zero missed communications.
- Implemented a full **Google Analytics 4 measurement strategy** - custom event taxonomy, conversion funnels, and **user path exploration graphs** - directly surfacing **drop-off points and informing product decisions** with real behavioral data.
- Engineered a complete **storefront end-to-end** using **Liquid + JavaScript** - custom theme components, **payment gateway integration**, and automated post-purchase notification flows **wired directly into fulfillment**.
- Configured and automated **AI image generation workflows** for product and lifestyle content and built **Meta ad creative pipelines** that cut creative production time significantly.

Better Software

Sept 2023 – March 2025

Software Engineer I

Remote

- Redesigned core **REST API architecture** in **Node.js + Express** with cursor-based pagination and **AWS S3 offloading** - reducing average response time by **35%** and eliminating bottlenecks under high-concurrency load.
- Integrated **Google Maps, Google Solar API, and NREL Energy Data APIs** into a real-time **proposal generation engine** - replacing a fully manual estimation process and driving a **20% lift in user engagement**.
- Built a **React + Node.js lead generation platform** with end-to-end workflow automation - eliminating manual repetition and improving **team operational efficiency by 15%**.
- Shipped **real-time communication features** using **CometChat + WebSocket** and built **interactive map-based data visualization** in React - enabling multi-user collaborative workflows that didn't previously exist.
- Integrated **Airtable CRM with WordPress API** to build a **bidirectional sync pipeline** - replacing manual data entry across systems and eliminating a recurring source of ops errors.
- Optimized **frontend component architecture** across multiple platforms, achieving a **30% reduction in page load time**; enforced **code quality** through systematic unit testing and peer code reviews.

EDUCATION

Swami Keshvanand Institute of Technology

2020 – 2024

B.Tech, Computer Science & Engineering | GPA: 8.4 / 10

Jaipur, India
